

Primed or painted cast iron
rainwater systems...

Which will you choose?

Some things are worth paying a little extra for...

Pre-painted cast iron is more expensive than primed cast iron, but the long-term cost benefits are substantial

CAST IRON

DURABLE

Primed or painted?

The upfront cost of pre-painted cast iron is more than primed cast iron, but the long-term cost savings far outweigh this modest initial investment.

Properly protected and installed cast iron can last in excess of 100 years!

But all too often, primed systems that are painted on site will suffer from premature exposure to the elements, and if water starts to attack the building, the cost of correction work will be massive when compared to the small initial investment in cast iron protection.

Our stocked cast iron rainwater systems, treated with a certified three-coat system, factory-applied under strictly controlled conditions, last up to 10 years before needing to be repainted.

The factory-applied painting takes place in strictly controlled conditions which means that it is applied to a consistently high standard. It therefore consistently performs better and remains beautiful for years.

The paint has been specifically developed to give a smooth and long lasting finish to the cast iron which is extremely difficult to replicate on-site.

Fantastic colour range

RAL 9010	White	
RAL 9005	Black	
RAL 7016	Anthracite Grey	
RAL 3020	Traffic Red	
RAL 6005	Moss Green	
RAL 5010	Flower Blue	
RAL 3009	Oxide Red	
RAL 8015	Chestnut Brown	

Colour without limitation

Order pre-painted black for next day delivery or any of our standard colours for delivery in 15 days. Any standard RAL colour can be supplied to order but may be subject to longer lead-times and colour surcharges. Please enquire with our customer service team on 0800 644 4426.

What's the real cost of primed?

Priming and painting on-site is simply more difficult, several factors such as weather, skill, care of the painter and paint quality have a huge impact on the outcome.

Cast iron guttering performance

False savings in materials and components that impact on maintenance costs and risk the integrity of the property, can be hugely expensive over the lifetime of the building.

Will your rainwater system stand the test of time?

Ask yourself these questions before you decide...

- Are weather conditions suitable for on-site painting?
- What is the quality of the paint and can you be sure all the coats will be applied on a busy site
- Will all the coats be evenly applied, to the correct thickness?
- Will the paint have sufficient drying time in the right environment?

The quality of installation and painting have a major impact on the lifetime and ongoing maintenance costs of rainwater systems.
